Office Action Summary Examiner
Jeffrey Stucker The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If the period for reply specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). - Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b). Status 1) Responsive to communication(s) filed on 2a) This action is FINAL. 2b) This action is non-final. 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under Ex parte Quayle, 1935 C.D. 11, 453 O.G. 213. Application/Control Number: 10/059,271

Art Unit: 1648

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-10, drawn to a protein, classified in class 530, subclass 350.
- II. Claims 11 and 12, drawn to either a method of using the protein or a composition comprising the protein, it is not clear which.
- III. Claims 13-15, drawn to a nucleic acid sequence,
 vector, and a cell, classified in class 536, subclass
 23.72.
 - IV. Claim 16, drawn to a method for producing a protein, classified in class 435, subclass 41.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and III are different from invention IV because the former are compositions and the later is a method. The compositions are different from each other because each has a different chemical structure and functions which are not interchangeable. Further, a search of each would not be coextensive.

Invention IV and inventions I (and II, if a composition) are related as process of making and product made. The

Application/Control Number: 10/059,271

Art Unit: 1648

inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the antigens can be purified from naturally occurring viruses or cultured in mammalian cells.

Inventions I and II will be examined together if invention II is directed to a composition comprising the protein on a substrate. However, if invention II is a method, it is distinct from invention I because the protein can be fixed to an immunoassay substrate without the use of a specific binding site or can be attached by way of the antigen being expressed on a cell or viral surface and the cell or virus is entrapped in a substrate.

Because these inventions are distinct for the reasons given above and have acquired separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be

Art Unit: 1648

examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
